

Fund Description and Investment Policy

The InvestCorp Treasury Securities Fund is an open-ended risk free (sovereign-only exposure) fixed income fund designed for investors who seek exposure to Treasury bills, notes and bonds or Treasury-backed securities. It presents a more active approach to investment that is well suited for conservative investors who want to invest in safe assets over the medium to long term. It is suited for retirement plans, education and funeral savings, church and school endowments, among others.

Investment Allocation

The current investment allocation of the Fund is as follows:

Fund Information

Weighted Average Maturity (Yrs.)	5.93
Duration (Yrs.)	3.68

Investment Approach

The Fund aims at all times to construct an optimal treasury portfolio relative to the market - based on value, duration and identified short-term market advances. The portfolio strategy is to diversify among the different types of government securities, tenor and yields. Our approach to investing in Treasury securities seeks to offer:

Investment Grade Quality

Investments are safe; backed by the full faith and credit of the government of Ghana

Prudent Liquidity Management

Active duration strategy to allow for liquidity management and provide opportunities for return enhancement through trading

Total Return

Active trading to enhance yield and improve alpha

Current Investment Strategy

With the current liquidity needs of commercial banks, (which form the largest local investor in GoG securities), we do not anticipate tightening in the short term by the Regulator. In light of this, the Fund will keep a significant portion of investments at the short to middle end of the curve while investing along the rest of the curve. This allows the Fund to immediately take advantage of increasing rates while benefitting in the interim from higher rates along the curve in this normal yield curve environment.

The performance of the Fund as shown represents past performance and by no means guarantees future returns. Investment returns and principal value of an investment will vary so that shares, when bought or redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance quoted.
